Subject Index of Volume 147

Adhesion
physical models of adhesive wear of polytetrafluoroethylene and its composites, 9
Aluminum matrix composites
dry sliding wear in 2124 Al–SiC_w/17-4 PH stainless steel systems, 355
Amorphous states
wear resistance of amorphous cobalt-based alloys, 275
Antifrictional properties
effects of chemical composition and morphological structure of surface oxides on the antifrictional properties of medium carbon steel, 295
Applied potential
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 1. Effect of applied potential, 59

Ball bearings
cage unbalance and wear in ball bearings, 93
dynamic loads and cage wear in high-speed rolling bearings, 119
$BaTiO_3$ ceramics
aspects of erosional wear behavior during tumbling of $BaTiO_3$ dielectric ceramics, 345
Bearings
distortion analysis of large thrust bearing on elastic support, 421
Bismaleimide polymers
solid–particle erosion of bismaleimide polymers, 155
Boron nitride
high-speed machining of cast iron with BZN compacts, 253
Burnishing
burnishing process using a rotating ball-tool – effect of tool material on the burnishing process, 185

Cages
cage unbalance and wear in ball bearings, 93
cage unbalance and wear in roller bearings, 105
dynamic loads and cage wear in high-speed rolling bearings, 119
Carbon steel
physical models of adhesive wear of polytetrafluoroethylene and its composites, 9
Ceramic multilayer capacitors
aspects of erosional wear behavior during tumbling of $BaTiO_3$ dielectric ceramics, 345
Charged particles
triboemission from various materials in atmosphere, 335
Chemical vapour deposition
studies on multilayer wear of CVD TiC–TiN multilayer composite coating, 227
Chloride ion levels
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 2. Effect of chloride ion concentration, 69
Cobalt alloys
wear resistance of amorphous cobalt-based alloys, 275
Cold strip rolling
evaluation of lubricants for cold strip rolling, 79
Copper
erosion of work-hardened copper, nickel, and 304 stainless steel, 145
Corrosion
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 1. Effect of applied potential, 59
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 2. Effect of chloride ion concentration, 69
Cratering
on the impact rate and impact energy of particles in a slurry pot erosion tester, 165

1991 – Elsevier Sequoia, Lausanne

Defect density
study of frictional sliding and defect density in the wear of bearing steel, 135
Distortion
distortion analysis of large thrust bearing on elastic support, 421

Elastic support
distortion analysis of large thrust bearing on elastic support, 421
Electrochemical machining
investigations on the process of electrochemical sinking, taking into account the randomness of phenomena occurring in the machining area, 25
Emission
triboemission from various materials in atmosphere, 335
Erosion
aspects of erosional wear behavior during tumbling of $BaTiO_3$ dielectric ceramics, 345
Erosion resistance
erosion of work-hardened copper, nickel, and 304 stainless steel, 145

Friction
study of frictional sliding and defect density in the wear of bearing steel, 135
note on the lubrication of composite slippers in water-based axial piston pumps and motors, 431
Fuel injection
wear investigations of injector nozzle using radionuclide technique, 375

Grinding
influence of microstructure on the wear of grinding media, 267

Hydrocarbons
surface decomposition and extreme-pressure tribological properties of highly chlorinated methanes and ethanes on ferrous surfaces, 401
Hydrodynamic lubrication
hydrodynamic lubrication of a porous slider: limitations of the simplifying assumption of a small porous facing thickness, 1

Impact erosion
on the impact rate and impact energy of particles in a slurry pot erosion tester, 165
Inclusions
measurement of the critical size of inclusions initiating contact fatigue cracks and its application in bearing steel, 285
Interelectrode gap
investigations on the process of electrochemical sinking, taking into account the randomness of phenomena occurring in the machining area, 25
Iron
effect of laser melting processing on the microstructure and wear resistance of gray cast iron, 195
high-speed machining of cast iron with BZN compacts, 253

Laser melting
effect of laser melting processing on the microstructure and wear resistance of gray cast iron, 195
Loads
dynamic loads and cage wear in high-speed rolling bearings, 119
Lubrication
effect of waviness and roughness on lubricated wear related to running-in, 323
evaluation of lubricants for cold strip rolling, 79
evaluation of piston ring materials in oil containing an abrasive using a ring-on-block test machine, 41
hydrodynamic lubrication of a porous slider: limitations of the simplifying assumption of a small porous facing thickness, 1
note on the lubrication of composite slippers in water-based axial piston pumps and motors, 431
Lubrication additives
surface decomposition and extreme-pressure tribological properties of highly chlorinated methanes and ethanes on ferrous surfaces, 401

Microcracks
measurement of the critical size of inclusions initiating contact fatigue cracks and its application in bearing steel, 285

Microstructure
effect of laser melting processing on the microstructure and wear resistance of gray cast iron, 195
influence of microstructure on the wear of grinding media, 267
Milling
high-speed machining of cast iron with BZN compacts, 253
Morgan–Cameron approximation
extension of the Morgan–Cameron approximation to include the effects of power law lubricants, 219
Multilayer wear
studies on multilayer wear of CVD TiC–TiN multilayer composite coating, 227

Nickel
erosion of work-hardened copper, nickel, and 304 stainless steel, 145

Oil
tribological behaviour of base oils and their separated fractions, 207
Oxide layers
effects of chemical composition and morphological structure of surface oxides on the antifrictional properties of medium carbon steel, 295

Piston ring materials
evaluation of piston ring materials in oil containing an abrasive using a ring-on-block test machine, 41
Plasma nitriding
tribological behaviour of plasma nitrided 722M24 material under dry sliding conditions, 385
Plastic strain
new technique to measure plastic strain in the machined surface, 311
Polytetrafluoroethylene
physical models of adhesive wear of polytetrafluoroethylene and its composites, 9
Porosity
hydrodynamic lubrication of a porous slider: limitations of the simplifying assumption of a small porous facing thickness, 1
Power law lubricants
extension of the Morgan–Cameron approximation to include the effects of power law lubricants, 219

Radionuclide technique
wear investigations of injector nozzle using radionuclide technique, 375
Recrystallization
new technique to measure plastic strain in the machined surface, 311
Roller bearings
cage unbalance and wear in roller bearings, 105
dynamic loads and cage wear in high-speed rolling bearings, 119
Rolling contact
measurement of the critical size of inclusions initiating contact fatigue cracks and its application in bearing steel, 285
Roughness
effect of waviness and roughness on lubricated wear related to running-in, 323

Sliding
dry sliding wear in 2124 Al–SiC_w/17-4 PH stainless steel systems, 355
study of frictional sliding and defect density in the wear of bearing steel, 135
tribological behaviour of plasma nitrided 722M24 material under dry sliding conditions, 385
Slippers
note on the lubrication of composite slippers in water-based axial piston pumps and motors, 431
Solid–particle erosion
solid–particle erosion of bismaleimide polymers, 155
Stainless steel
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 1. Effect of applied potential, 59
corrosive wear behaviour of 304-L stainless steel in 1 N H_2SO_4 solution. Part 2. Effect of chloride ion concentration, 69
erosion of work-hardened copper, nickel, and 304 stainless steel, 145
Steel
new technique to measure plastic strain in the machined surface, 311
dry sliding wear in 2124 Al–SiC_w/17-4 PH stainless steel systems, 355
effects of chemical composition and morphological structure of surface

oxides on the antifrictional properties of medium carbon steel, 295
influence of microstructure on the wear of grinding media, 267
measurement of the critical size of inclusions initiating contact fatigue cracks and its application in bearing steel, 285
study of frictional sliding and defect density in the wear of bearing steel, 135
Surface decomposition
surface decomposition and extreme-pressure tribological properties of highly chlorinated methanes and ethanes on ferrous surfaces, 401
Surface roughness
investigations on the process of electrochemical sinking, taking into account the randomness of phenomena occurring in the machining area, 25

Titanium
studies on multilayer wear of CVD TiC–TiN multilayer composite coating, 227
Tool material
burnishing process using a rotating ball-tool — effect of tool material on the burnishing process, 185
Triboemission
triboemission from various materials in atmosphere, 335
Tribological behaviour
tribological behaviour of base oils and their separated fractions, 207
tribological behaviour of plasma nitrided 722M24 material under dry sliding conditions, 385
Tribological properties
surface decomposition and extreme-pressure tribological properties of highly chlorinated methanes and ethanes on ferrous surfaces, 401
Triboluminescence
triboemission from various materials in atmosphere, 335
Tumbling
aspects of erosional wear behavior during tumbling of $BaTiO_3$ dielectric ceramics, 345

Waviness
effect of waviness and roughness on lubricated wear related to running-in, 323
Wear
cage unbalance and wear in ball bearings, 93
cage unbalance and wear in roller bearings, 105
Wear resistance
effect of laser melting processing on the microstructure and wear resistance of gray cast iron, 195
evaluation of piston ring materials in oil containing an abrasive using a ring-on-block test machine, 41
wear resistance of amorphous cobalt-based alloys, 275
Work hardening
erosion of work-hardened copper, nickel, and 304 stainless steel, 145
